Introduction to NLP (CS7.401)

Monsoon 2021, IIIT Hyderabad
04 Jan, Tuesday (Lecture 1)

Taught by Prof. Manish Shrivastava

Introduction

Language processing can be divided into different stages. We can talk about language processing at the word level (tokenisation, PoS tagging, head-finding), the sentence level (parsing, chunking) or the discourse level (coreference). It also includes semantic processing (semantic roles, word sense disambiguation). Speech processing, similarly, has its own component processes – phonetic transcription, segmentation and prosody.
